Green Investment in Asian Cities to Reduce Natural Disaster Risks

This article discusses the risks associated with natural disasters, with particular focus on the vulnerability of energy systems. It examines the opportunities for local/community-based infrastructure to prevent risks through installing locally based energy systems, financing mechanisms to prevent risks and risk transfer systems as well as the associated challenges that exist with respect to their establishment.

Participatory 3-Dimensional Mapping for DRR: a field manual for practitioners

The purpose of this manual is to assist practitioners in developing appropriate skills for applying participatory 3D mapping (P3DM) in disaster risk assessment and designing activities that focus on reducing that risk. P3DM is a flexible tool which enables people to express their knowledge and creativity. The manual comprises a comprehensive but flexible framework which should be adjusted to local needs and context.
