What does it take to mainstream disaster risk management in key sectors?

This guide draws on climate-related disaster risk management (DRM) within the context of climate compatible development. It explores why mainstreaming DRM into development policy has had widely varying results between countries. This guide attempts to identify the ways forward for integrating short- and long-term considerations for disaster risk reduction in important development sectors, also including the environment.

Adaptation to climate change in water, sanitation and hygiene: assessing risks, appraising options in Africa

The report identifies key risks by looking at climate change alongside other pressures, and then how to identify and appraise adaptation options using cost-benefit analysis (CBA). It also illustrates how CBA can be used to compare costs and benefits under different assumptions around likely benefit streams from health and time saving gains, using a mix of primary and secondary data.

IPCC fifth assessment report: climate change 2014 - impacts, adaptation, and vulnerability (IPCC WGII AR5)

This document presents the Working Group II (WGII) contribution to the IPCC Fifth Assessment Report (AR5). It details the impacts of climate change, the future risks from a changing climate, and the opportunities for effective action to reduce risks. A total of 309 coordinating lead authors, lead authors, and review editors, drawn from 70 countries, were selected to produce the report.
