A new report by The International Federation of Red Cross and Red Crescent Societies, has found that lack of access to information and technology is having a major impact on people’s ability to prepare for and survive disasters. The study examines the impact of technological innovations on humanitarian action and asserts that responsible use of technology offers concrete ways to make humanitarian assistance more effective and can reduce people’s vulnerability to disasters.

**Hazard maps to boost local government's disaster management plans**

In a move to mainstream disaster risk reduction in local government policy and enhance local DRR management plans in the Greater Metro Manila area, the governments of Australia and the Philippines have jointly developed comprehensive hazard and risk assessment maps, that will be distributed to over 24 local government units in Manila.

These maps will be accompanied by exposure databases, which contain information about the area, the local population, and the socio-economic characteristics of the local communities.
